

February 5th. 2017

To the concerned person/authority,

I have been working with Mr. Vedang Ratan Vatsa for a long time now and I am happy to recommend Vedang Ratan Vatsa (Studio Tesseract) for any kind of website and mobile app development work.

In the world of contracting, work comes and goes so unexpectedly that it can sometimes be difficult to keep good people around. I wanted to get my application developed in a short span of time so that my clients can make use of my services via mobile application. After discussing the requirements with Vedang, we decided to go for a mobile-friendly website instead of a mobile application. Vedang put a lot of efforts in finishing the task as soon as possible and did all the updations that I asked. He is, by far, one of the most qualified developers/ project managers that I have encountered.

In the course of managing his project, Vedang demonstrated an ability to quickly go through the requirements and come up with a solution for every requirements that I listed. He helped me a lot in working closely with me and understand my requirements even though we had some language barriers between us but Vedang has never let these barriers be the reason of any delay in the work. He was able to focus on the stated objectives of the project and prioritize every task necessary to accomplish the desired end result.

I may be reached out at my personal email - Eranmalovani@gmail.com to ensure/ confirm the authenticity of this letter of recommendation.
